- Collaborated with the webmaster to create a new user-friendly Drupal website as well as update website with data
- Created PowerPoints and handouts for presentations at national conferences using Adobe Illustrator and Excel
- Awarded in a poster symposium in April 2015 for relevancy of research and communication skills

## **ADDITIONAL**

- Conversational Proficiency in Urdu and Hindi; Elementary Proficiency in Egyptian and Levantine Arabic
- Research Assistant in the big data LIFE-M project which links together census records for machine learning (10 months)
- Career Center and Dean of Students Advisory Board Member
- Participant in Intramural Soccer, dedicated fan of The Godfather, currently learning the piano

## Python and Data Projects:

**Relationship Between Michigan County Population and Number of Hospitals:** Results show that population is a stronger indication to the number of hospitals compared to county per capita income, as the wealthiest per capita county (Oakland) has the second most number of hospitals (12) but Detroit's county (Wayne) has 3 more hospitals to account for 618,222 more people.

The results are understandable, so it was a great way to be introduced to the types of healthcare data publicly available and being mindful of public health factors.

## Consulting Projects:

**Nostrum Energy Social Media:** Spent the semester with a team of 4 to create a social media plan for Nostrum Energy, a local company specializing in fuel injectors competing with Bosch and GM, as part of my Social Media and Organizations course. Received guidance from Ernst & Young consultants. Followed traditional consulting process beginning with statement of work to final report.

Strategies recommended: content calendar, increasing educational content, cross-promoting content between platforms, increasing executive presence on social media.

**Ann Arbor Natural Area Preservation:** Worked with a team of 7 to assist the client analyze their data as part of the Ann Arbor Data Dive day event. I learned about Excel Pivot Table features and used them to create 9 graphs on frog species patterns.
